Committed to Green

We know how important the environment is to our clients and being "Green" is nothing new for us. While being green seems to be a new concept for many companies, it's been a part of Konell's processes since the company was founded in 1984. We've always been committed to salvaging, reusing and recycling as many materials as possible to keep construction debris out of the landfills, saving clients costly disposal fees along the way.

For more information about the types of materials we salvage, please visit our website.

Demolition & High Reach

Konell Construction & Demolition has extensive experience in safe and efficient demolition. Our crews and equipment are able to handle nearly any demolition project, including those located in busy urban areas.

Our new High Reach equipment has the scope, stability and power to safely demolish buildings or constructions that are beyond the limits of normal machinery.

The High Reach equipment is environmentally friendly, has advanced safety features that provide stability for work at high elevations and the design enables better accuracy and keeps workers further away from falling debris.
